Experimentalni a klinicke zkusenosti s Pelentan-Rapidem Experimental and clinical experiences with Pelentan Rapid Casopis Lekaru Ceskych 1948, 87/2 (36-41) Graphs 2

Experimental and clinical experiences with a new anticoagulant of the commarine series. Pelentan Rapid is the commercial name of the ethylester of di-(4-oxycommarinyl) acetic acid. It is about one-fourth the strength of dicommarol, but it controls the prothrombin level better and acts quicker, and after discontinuation of the drug the normal prothrombin level is restored more quickly than with discommarol. Boses ten times higher than the maxium amount therapeutically given were not toxic (experiments on animals). Contra-indications are less frequent than with discommarol.

So: Excerpta Medica, Vol. II, No 7, Sec. II, July 1949

Pelenten-Rapid v therapii chorob cevnich 'Pelenten-Rapid' (courarin derivative) in the treatment of vescul r effections Caschis Lekeru Ceckych 1940 27/11 (312-320) Graphs 4 Tables 1

Clinical experiences with treatment of 260 cases of vascular diseases with the new compound of counarin (Pelenten-Rapid, ethylester of di-h-ox cumering) acetic acid) are described. It was found that Pelenten-Rapid has the therapeutic properties of American dicounarol without its toxicity and therefor diminished darger of bleeding. The reas Willity of prolonged administration in chronic vascular disease is therefore its great advantage.

So: Excerpte Redica, Vol. II, No. 3, Sect. II, March 1949

REJSEK K. and KUBIK M. PŘÍŠPĚVEK ke koegulogramu Contribution to the coegulogram Casopis Iékařů Českých 1948, 87/32 (879-880)

Observation of the formation of fibrin crystals with the Fonio-Schwenderer method gave the following results: In normal blood formation of the fibrin network is very rapid and the crystals are thick and short. In hypoprothrombinaemia, caused either by dioxycoumarin or by damage to the liver, the first fibrin crystal appears at the same time as in normal blood, but the crystals are very fine and thin. After injection of heparin the fibrin is not formed, but in blood taken three hours later the fibrin network starts to grow at the normal time and with normal speed but the crystals are thin and bristle-like.

Vnitrni lekarstvi, 1957, 3, No 5, 441-447 Title

Crig Pub

In 29 healthy individuals 16 - 69 years of age and in 50 patients with arteriosclerosis, obliterative endarteritis, coronary disease, varicose changes of the veins, Abstract etc. a study was made of the adhesive properties of blood platelets using the Moulton technique with the author's modification (use of a glass filter with a porosity of 15 to 40 m). The number of blood platelets was determined by placing citrated blood on glass fibers

woven into the shape of a mosh. In healthy people up to 40 years of age the BP consisted on an average of 63,660,

Elements. APPROVED FOR RELEASE: 03/13/2001 CIA-RDP86-00513R000827020005-7 Abs Jour : Ref Zhur Biol., No 3, 1959, 12633

> and in older ages of 70,645. In arteriosclerosis with obliteration of the vessels the figures were close to normal in 81.8% of the patients, and in obliterative endarteritis there was an increase in 33% of the patients. Adhesiveness of BP was increased in the processes of destruction of the tissues and cells in the orgamism: after operation or childbirth, in the period clinically characterized by frequent occurrences of thrombosis, in myocardial infarction, pulmonary infraction, gangrenous processes, etc. Increase in adhesive properties was also observed with an increase in the number of BP in the blood, for example, with polycythemia vera, idiopathic thrombocythemia, and essential thrombophilia. -- A.I. TITLE:

The Zyryan rady Prospecting Committee Puts Into Action the

Decisions of the Communist Party

PERIODICAL:

Razvedka i okhrana nedr, 1959, Nr 3, pp 51-54, (USSR)

ABSTRACT:

The article deals with the trade-union aspects of the Zyryanovskaya Geological and Prospecting Expedition in Kazakhstan, noted for its discovery of the Zyryanovskoye polymetallic ore deposit. Its chief is S.M. Groznykh and its
chief geologist - I.K. Neklywov. Among the innovations,
the following now techniques are employed or being introduced there: 1) the so called "directed" drilling to
fight drilling errors with regard to both azimuth and zenith;
2) testing coreless drilling of soft rocks (hardness up to
Class IV) deposited above the ore stratum, with highly
effective drilling results achieved due to milling cutters;
3) shot is fed into the well hole in small dosages by a
new shot feeding machine of the D-3-type to fight oblique
drilling; 4) a new method to drill hard rocks by using a

Card 1/2

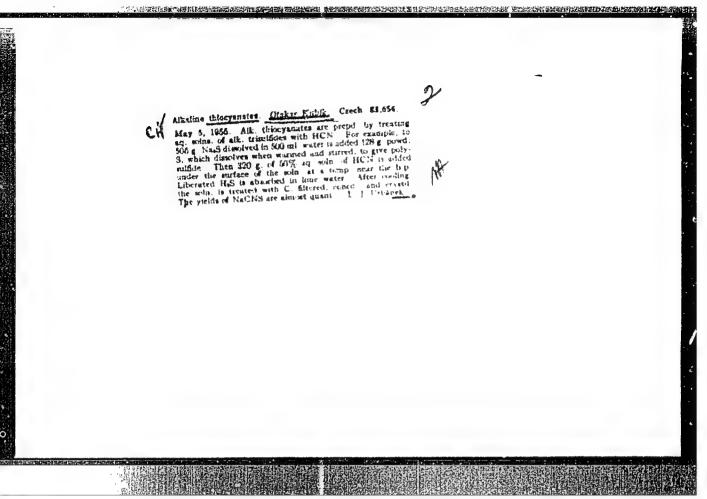

307/132-59-3-12/15

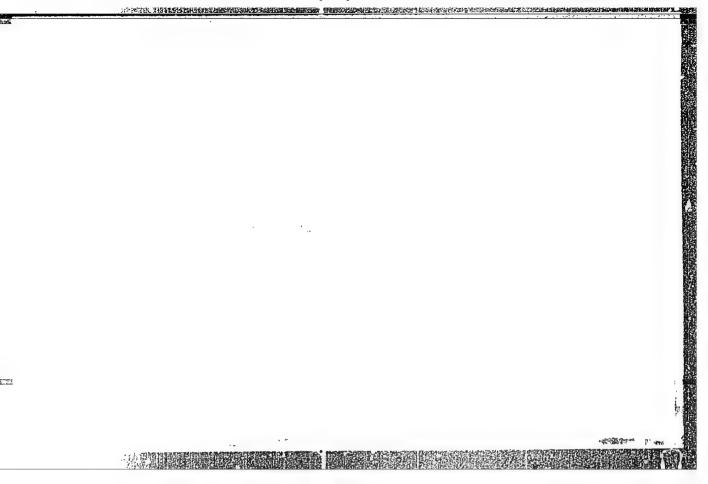

The Zyryanovskiy Prospecting Committee Puts Into Action the Decisions of the Communist Party

combination of shot and "sechka" (steel fragments cut to small pieces like chopped straw) is being developed. The expedition, among others, employs a ZIF-1200A-type drill rig and a mechanism of the FO-47A-type for screwing together and unscrewing the pipes. In matters of competition, the Leninogorskaya geologorazvedochnaya ekspeditsiya (Leninogorsk Geological and Prospecting Expedition) and BRIZ are mentional.

ASSOCIATIONS FSK profsoyaza rabochikh geologorazvedochnykh rabot (Central Committee of the Trade-Union of Geological and Prospecting Workers), Zyryanovskaya geologorazvedochnaya ekspeditsiya (Zyryanovskaya Geological and Prospecting Expedition).

Title : Calculation of a Nonlinear Circuit Excited by an Alternating Voltage.

Orig Pub: Slaboproudy obzor, 1956, 17, No 7, 368-375

Abstract : Examination of the calculation of a circuit with nonlinear mutual in-

ductance. The circuit is described by a nonlinear differential equation of the second order, the right half of which contains the time t. A specific example is used to show how the phase-plane method can be used to determine the transient and steady state processes in the case of forced oscillations in nonlinear circuits. The good agreement between theory

and experiment is noted.

PERFORICAL: Elektrotechnick Casopis, no. 9, 1961, 566-579

In the solution of such systems, the presence of constant terms can be taken into account in a modified describing function method, in which the zero-order term is included along function method, in which the zero-order term is included along with the fundamental component. Three conditions are obtained for the analysis of the system: a condition on the existence of a constant component, a condition of amplitude equilibrium: a condition of phase equilibrium. The method is successively applied condition of phase equilibrium. The method is successively applied to systems with a single multivalued nonlinear element, a circuit with two unsymmetrical nonlinearities, and a system with a unsymmetrical nonlinearities. A final example concerns a nonlinear element with the characteristic dependent not only on the input quantity but also on its derivative. There are 10 figures and to Soviet-bloc references.

Abstract: This section now has a staff of 20, and its work during the decade was primarily on prevention and tremtment of occupational diseases in agriculture: pesticide toxicity, tractors and various mechanized aids to production in farming. Some research was done on toxicology of antimony and occupational risks to health in mining and refining Sb; polycyclic hydrocarbons; toxicology of furan and its metabolite furoylglycine; methyl chloride microanalysis. Continuous cooperation not only with the field workers, but with many other scientific and academic institutions. There were 60 publications, 12 reviews, 16 popular educative articles, 3 textbooks.

Frague, Fracovni Lekerstvi, Vol 15, 10 1, Jan 1963; 7: 31-39.

Abstract: The officially set highest permissible level of noise in Czechoslovahia, like in Foland, Hungary, Horway and Finland 12 80 decibels, but it disregards the spectral composition of the sound and is unsuitable for that reason along also it is probably slightly too high. Hoise has complet effects on the central nervous system and endedrine organs in addition to its adverse direct effects on the ear; further research in this field is therefore necessary.

"Medical Prevention of Chronic Acoustic Trauma."

Prague, Pracovni Lekarstvi, Vol 18, No 4, May 66, pp 176 - 179

Abstract Author's English summary modified 7: Method for testing employees who will be working in locations subjected to a noise hazard is described, and a follow-up system during work at such places is discussed. Examinations should be made frequently during the first year of employment; their frequency should depend on the degree of noise and the sensitivity of the individual. 4 Western, 4 Ozech, 3 Russian references. (Manuscript received 4 May 65).

"Research Covering the Malignant Nature of Noise"

Prague, Pracovni Lekarstvi, Vol 18, No 5, Jun 66, pp 224-225

Abstract: The damage caused to the hearing organs by excessive levels of noise is discussed. Not only the hearing organs, but also the vegetative and psychic functions are damaged by high levels of noise. Vegetative changes in peripheral skin arteries due to noise are described; high levels may affect the heart by increased resistance to blood flow through these arteries. Arteriosclerosis may be due to high levels of noise. Maximum safe levels of noise are 35 db. Noise can cause deterioriation in some diseases, and slow down healing after surgery. It also decreases production output of healthy workers. 13 Western, 2 Czech, 9 Eastern references. (Manuscript received 31 Jul 65.)

24-hour Starvation of Rats." "Metabolic Changes During

Prague, Goskoslovenska Pysiologie, Vol 15, No 2, Feb 66, p 81

Abstract: The rats were fed Larsen diet ad libitum before the experiments. Duration of starvation period studied was: 0, 3, 6, 9, 12, 16 and 21 hours. Glycomia decreases as early as 3 hours after withdrawal of f.od and goes on decreasing for9 more hours, after which its level is constant at 50-60 mg/s. The glycogen content of liver decreases in 12 hours from 4-5% to 0.1-0.2%, and then remains steady. Glycogen content of the myocardium did not change during the experiment. The level of non-esterified fatty acids in the serum reaches double its original level in 12 hours, and does not change further. Esterified acids decrease in the first 6 hours and then slowly increase to the original level. 2 Western references. Submitted at "16 Days of Physiology" at Kosico, 29 Sep 65.

ABSTRACT:

The activities of Tsentral'nyy usel svyazi Ministerstva mors-kogo flots (Central Radio Station of the Ministry of the Merchant Marine) are described in a narrative style. It is emphasized that Soviet women work as highly-skilled radio operators on ships and at shore radio stations. Many of them are members of DOSAAF amateur clubs and participate in all kinds of radio competitions.

TITLE: Effect of curare on sleep cycles in rats [This paper was presented at the Third Interdisciplinary Conference on Experimental and Clinical Study of Higher Nervous Functions held in Marianske Lazne from 19 to 23 October 1964.]

SOURCE: Activitas nervosa superior, v. 7, no. 2, 1965, 147-148

TOPIC TAGS: drug effect, rat, behavior pattern, cerebral cortex, EEG, nervous system drug

ABSTRACT: Experiments were carried out on 8 rats with electrodes implanted in the cerebral cortex, dorsal hippocampus and mesencephalic reticular formation. EEG was continuusly recorded. Trachea was prepared and left in situ and again EEG recorded. Next day tracheotomy was made and 3.2 mg/kg body weight of curare was administered. EEG was recorded until the animal died. Curare affected the sleep phases, and the brain showed slightly marked high voltage activity with slow waves (rudimentary telencephalic sleep) which either lasted continually or was interrupted by electrical seizures, which later became manifest somatically. In some cases it was interrupted by spontaneous and frequently repeated arousal reactions. Curare did not cause changes in frequency or duration of electrical seizure or arousal reaction. ORG: Astronomical Observatory, Wroclaw University TITLE: Absorption lines in the moving atmosphere'. I. Effect of the velocity gradient in the atmosphere on the equivalent widths of the spectral lines SOURCE: Acta astronomica, v. 15, no. 2, 1965, 177-184 TOPIC TAGS: spectral line, spectral energy distribution, absorption line ABSTRACT: On the assumption that a spectral line is formed by true absorption. it is shown that the velocity gradient, independent of the sign of this quantity, increases the equivalent width of the line. With growing velocity gradient, the curve of growth slides upward to the right along the extension of its rectilinear part. In the extreme case of an infinitely great velocity gradient, the curve of growth degenerates into a straight line. The authors thank Professor A. Opolski for his valuable discussion of the problem.
